DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 17, 2009 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bahrmann et al (US 5,808,168) and Vora et al (US 5,714,662).

The instant claims is drawn to a process for preparing butyraldehyde by hydroformylating a propylene-containing stream obtained by the conversion of oxygenates to olefins.

Bahrmann et al teach the preparation of butyraldehydes by the hydroformylation of propylene (see examples). Bahrmann et al, however, do not expressly teach the

source of the propylene. It is well-known in the chemical art that hydrocarbons, specifically, unsaturated hydrocarbons, may be produced from oxygenate conversion processes. A person having ordinary skill in the art may look to the process taught by Vora et al for producing light olefins from methanol as a source of propylene. As such, the instant claims are rendered obvious by the combined reference teachings.

Allowable Subject Matter

The following is a statement of reasons for the indication of allowable subject matter: as amended, the instant claims recite a hydroformylation of a propylene-containing stream having a high concentration of dimethyl ether in said stream. Prior art processes have sought to diminish the concentration of dimethyl ether in olefin streams prior to further reaction of said olefin. It therefore would not have been obvious to a person having ordinary skill to hydroformylate such a propylene-containing stream without first significantly reducing the concentration of any dimethyl ether present in said stream.
